

COLD BREW TEA

COLD BREW SYSTEM
HOW TO INSTRUCTIONS

Curtis®

How to make Cold Brew Tea

Instructions (Makes 4 gallons)

- 1 Place Toddy Strainer inside the Curtis TC-6H or TC-7H.
- 2 Place Toddy One-time Paper Filter inside the strainer.
- 3 Pour 32 tablespoons of loose-leaf tea into the paper filter. (2 Tbsp/32 oz. of cold water)
- 4 Gently pour 1 gallon of water over the loose-leaf tea, making sure to saturate as evenly as possible.
- 5 Tie the paper filter at the top securely with string.
- 6 Pour the remaining 3 gallons of water into the Cold Brew System.
- 7 Place lid on top of the unit and steep at room temperature 30 - 60 minutes.
- 8 After steeping, lift up the strainer and paper filter inside. Allow tea to completely drip out before removing. Refrigerate for 8 hours.
- 9 Discard loose-leaf tea and paper filter. Rinse the strainer and allow to air dry before using again.
- 10 Add water to tea concentrate in the ratio according to your recipe (2:1 water to concentrate is a great place to start) and serve over ice. Store in refrigerator. **Enjoy!**
