# Curtis GENESIS

Introducing the Curtis Genesis - A New Brewing Tradition.

## Curtis Genesis Bean-to-Cup Coffee Machine

Serving a freshly prepared, perfectly made cup of black coffee has never been easier. The new Curtis bean-to-cup brewer is engineered for simplicity and profitability. With an easy-to-navigate touch display — for self-serve or staff operation — customers are moments away from spectacular bean-to-cup black coffee. Seamless, intuitive technology increases sales and decreases labor and waste. With a counter space-saving design, this machine fits anywhere and accomplishes everything you need to run a productive, profitable business.

## Benefits and Features

### User interface

At the heart of our customer-facing innovation is the Curtis Genesis user interface, which offers easy navigation and flexible options for coffee at the touch of a button. It is intuitive and simple to use, and can be set up either for self-serve or staff operated. Operators have the ability to modify blend icons, beverage size appearance and text without having a technician on-site.

### Operational Efficiency

The Curtis Genesis was designed with operational efficiency in mind. It simplifies standard operating procedures and support requirements. Much of the machine's regular maintenance does not require tools. This process allows for faster fix time and less service. Additionally, our high-capacity 28 gram brewing chamber is the most recognized, reliable and heavily used in the industry. This automat enables operators to brew beverages up to 24 ounces in one cycle, while maintaining quality, consistency and speed.

### Smart Remote\* and Telemetry\*\*

Operators frequently select the elevated offering of the Curtis Genesis Smart Remote and Telemetry capabilities. The Smart Remote feature enables your customers to utilize a touchless operation simply by scanning a QR code via their personal smart phone. Once scanned, customers see the drink menu populated on their phone to then select and dispense their chosen beverage.

For larger multi-unit operators, the Telemetry feature provides an accurate overview of both sales and machine performance; all accessed through a user-friendly analytics dashboard.

## Additional Features

- Brew a cup of coffee in less than 35 seconds.
- Space-saving operational footprint, less than 13 inches wide.
- Best-in-class heating technology for consistent brewing temperature with no recovery time between beverages.
- Two hoppers, each with 2.2-lb. capacity, allowing for up to 70 cups between refills.
- The large 28 gram automat provides consistency and speed. It can produce a 24 oz cup of coffee in one brewing cycle.

## Dimensions

## Model Configurations

Model #	13.1970.0100	13.1970.0200
